## Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

#### Listing of Claims:

Claims 1-7 (canceled).

### 8. (Currently amended)

An annular gap seal (20) for a valve (1) A combination valve, piston, cylinder and annular gap seal, using which the said annular gap seal blocking a flow of a fluid from a high-pressure side (37)—to a low-pressure side (38)—of the valve (1) may be blocked in a blocked position, the valve (1)—having a cylinder (9)—which the fluid may flow through and in which a piston (12)—is axially displaceable, and an annular gap (19) between the piston (12)—and the cylinder (9)—being sealable in the blocked position using the annular gap seal (20), which lies in a peripheral groove (21)—of the cylinder (9), the groove having an axially projecting, peripheral lug (32)—on both sides (21), two sealing rings (24, 25)—positioned mirror-symmetrically next to one another in the groove (21)—being provided and a sealing surface (29)—of a first sealing ring (24, 25)—facing toward the low-pressure side being able to be pressed fluid-tight

against a groove wall (30)—by the fluid from the high-pressure side (37)—in the blocked position,

wherein, in the blocked position, a sealing shoulder (31)—of the first sealing ring (24, 25)—facing toward the low-pressure side (38)—may be pressed fluid-tight against the peripheral lug (32), which projects axially into the groove (21), and a sealing lip (27)—of the first sealing ring (24, 25)—facing toward the low-pressure side (38)—may be pressed fluid-tight against the piston by the fluid from the high-pressure side (37).

### 9. (Currently Amended)

The annular gap seal (20) A combination valve, piston, cylinder and annular gap seal, according to claim 8,

wherein the sealing rings (24, 25) have a C-profile (28) and the C-profile (28) of the first sealing ring (24, 25) facing toward the low-pressure side (38) is expandable in the blocked position by the fluid from the high-pressure side (37).

# 10. (Currently Amended)

The annular gap seal (20) A combination valve, piston, cylinder and annular gap seal, according to claim 8,

comprised of oversized dimensions in relation to the distance between piston  $\frac{(12)}{}$  and groove base  $\frac{(34)}{}$ , so that the

annular gap seal (20) may be laid in the groove (21) with pre-tension.

## 11. (Currently Amended)

The annular gap seal (20) A combination valve, piston, cylinder and annular gap seal, according to claim 8,

comprised of stabilizing element  $\frac{(26)}{(26)}$  which may be laid in the direction of the groove  $\frac{(21)}{(26)}$  with the sealing rings  $\frac{(24, 25)}{(26)}$ .

## 12. (Currently Amended)

The annular gap seal (20) A combination valve, piston, cylinder and annular gap seal, according to claim 8,

wherein the stabilizing element  $\frac{(26)}{}$  is a coiled spring which may be inserted in a torus shape.

## 13. (Currently Amended)

The annular gap seal (20) A combination valve, piston, cylinder and annular gap seal, according to Claim 11,

wherein the sealing rings  $\frac{(24, 25)}{(24, 25)}$  may be pre-tensioned radially in the direction of the piston  $\frac{(12)}{(12)}$  using the stabilizing element  $\frac{(26)}{(26)}$ .
